

## CASE STUDY 1: Binarch's SharePoint work to a Manufacturing Company

Report Distribution System is used to deliver the business warehouse reports to users via SharePoint portal. It delivers backorder reports to the Sales Managers, Sales Representatives & Plant Operational managers and commission reports to sales representatives. This system has been developed as a generalized framework so that it is easy for maintenance and extension for new reports.

### KEY FEATURES:

- Automatically on daily basis, reports from a ERP system will be pushed to SharePoint portal.
- Automatic Permission (by group/department/users) setting for published reports.
- Automatic Report Archiving, Report Formatting.
- Custom developed Admin Module to configure and maintain 'Report Portal System'.
- Automated Email notification on successful generation to all users/department/group.
- Till date this is a very productive solution given by Binarch where on daily basis 1000 variety of reports being pushed to SharePoint portal with nearly 5000 user base.
